

Embedded Links Documentation

Terminology:

- Link File: Original File where links are present.
- Linked File/s: Files to which Original File links are pointing.

Supported File Types:

"docx","xlsx","pptx","gdoc","gsheet","gslides","doc","xls","ppt","pdf"

Supported Mime Types:

"application/vnd.openxmlformats-officedocument.wordprocessingml.document",
"application/vnd.openxmlformats-officedocument.spreadsheetml.sheet",
"application/vnd.openxmlformats-officedocument.presentationml.presentation",
"application/vnd.google-apps.document",
"application/vnd.google-apps.spreadsheet",
"application/vnd.google-apps.presentation",
"application/pdf",
"application/vnd.ms-powerpoint",
"application/msword",
"application/vnd.ms-excel"

Case 1: (Box, DropBox)

1. Links are scanned and fixed after data migration.
 - a. Links are fixed only for those files belonging to the same user.

User 1	User 2
File 1	File 4
File 2	File 5
File 3	File 6

File 1 has links to File 2 and File 3	Links are corrected
File 1 has links to File 4, 5 and 6	Links are not corrected
File 4 has links to File 5 and File 6	Links are corrected
File 4 has links to File 1, 2 and 3	Links are not corrected

- b. If you are doing a Folder-by-Folder migration, please halt Embedded Links migration, until all folders of that user are migrated to the destination. Otherwise, the correction will not work properly.
2. Cross user links replacement Feature
If correction of links for files belonging to other users is required, then please contact Engineering team to enable this feature. But please follow the below guidelines

- You need to wait until all users' data is migrated and then run embedded links correction.
- This process will take a very very long time depending on the total file count and number of users and it will impact overall timeline. So, discuss with customers and plan this properly.

Case 2:

MyDrive to OneDrive		
User 1	User2	Shared Drive
File 1	File 3	File 5
File 2	File 4	File 6

File 1 has links to File 2 only	Links are corrected
File 1 has links to File 3, File 4, File 5	Links are not corrected
File 3 has links to File 4 only	Links are corrected
File 3 has links to File 1, File 2, File 6	Links are not corrected

Shared Drive to SharePoint		
Shared Drive 1	Shared Drive 2	User 1
File 1	File 3	File 5
File 2	File 4	File 6

File 1 has links to File 2 only	Links are corrected
File 1 has links to File 3, File 4, File 5	Links are not corrected
File 3 has links to File 4 only	Links are corrected
File 3 has links to File 1, File 2, File 6	Links are not corrected

If you want links to all users files and shared drive files to be corrected, you need to halt the embedded links correction and run it after all the data is migrated. Please note that this will significantly take long time to correct the links and impact the overall timelines. Please discuss with customer and plan it.

Other Important Points:

1. Link files undergoing frequent edits in source may lead to changes in file structure that conflict with the destination file. This results in incomplete link replacement. In such cases, links will be fixed in the delta.
2. Encrypted or password protected documents cannot be read/processed.
3. Microsoft old files or files before 2007 fails with unable to read header. As These files are not supported by the Apache library or Stax parser to scan the document.
4. Tool always considers the source stream for links scanning and fixing. Tool will replace links in source stream, and we upload source stream to the destination. In case of edits in the destination, files are overwritten with source version of file.

Reason why source file is considered for links replacement:

When files are edited, there are high possibilities of content being moved/deleted/added. This will result in underlying xml structure changes, which does not match with source structure/tag ids. So even if links are identified, we cannot replace them at destination in the file.

5. If the file is opened in destination, and we try to upload the link replaced stream, it fails with resource locked error, need to retry such files after closing file.
6. Embedded links correction for large files will take a very long time, please discuss with customer and plan accordingly.
7. CF embedded links does not correct formulas or files referenced in formulas. We have observed Microsoft can try to auto correct some formulas depending on the type of the formula and link, but our tool does not edit or update any formulas.
